1. OVERVIEW

HWP60A forced circulation engine water heater is composed of 3 parts (control section, water pump and water heater).

If the outside temperature is lower than 4° C, engine coolant and lubricant may condense into solid state and lose their lubricating and cooling properties during cranking, which can damage the engine. Thus engine heater should be installed to ensure normal starting and running of the engine when the outside temperature is lower than 4° C.

HWP60A forced circulation engine water heater combines the following features: cast stainless steel inner pipes and end closure with high corrosion resistance; heating and overheat light indicators; user-defined thermostat set point; dry heating and overheat protection.

This product is suitable for various engine with (25~50) L displacement.

Please login our company's official website (www.smartgen.com.cn) to select heaters.

2. PERFORMANCE AND CHARACTERISTICS

| ——The circulating water pump adopts special customized pump with stainless steel pump head; |
|---|
| Microprocessor design of control section and PT100 temperature sampling. Coolant temperature |
| can be set via the control panel. Four digital LED display, current coolant temperature and all kinds of |
| set point temperature can be displayed clearly; |
| ——Dry heating and overheat protection due to the inner overheating temperature detect switch; |
| ——Separately control of water pump and water heater: power on the water pump and water heater |
| synchronously, once the set temperature has reached, water heater will be powered off firstly, after 60s, |
| following is water pump. The goal is to prevent heat concentration and significantly prolong water |
| pump lifetime; |
| ——Manually test the water heater and water pump are normal or not via panel button; |
| ——Fine cast aluminum enclosure; |
| ——Stainless steel inner pipes and sealed end closure; |
| There is a water drain valve with seal ring on the bottom of the heater so as to be used when |
| needed; |
| ——There is one-way inlet valve on the water inlet; |
| ——This product can work normally at -40°C temperature. |

3. SPECIFICATION

Table 2 – Parameters Specification

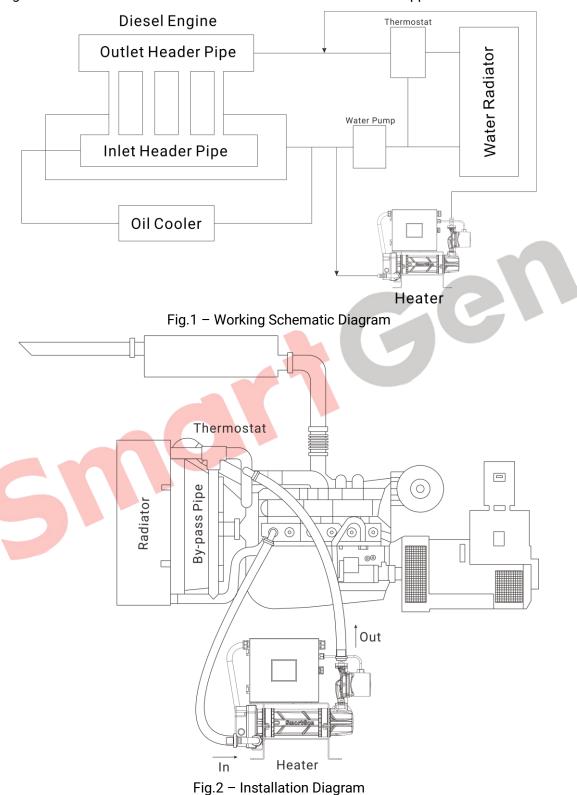

| ltem | HWP60A |
|--------------------------|---|
| Rated Power | 6000W |
| Rated Voltage | AC 420V |
| Rated Current | 8.3A |
| Phase | Three phase |
| Engine Displacement | (25~50) L |
| Thermostat Range | Off: (5~99)°C On: (0~94)°C |
| Default Thermostat Range | Off: (40±2)°C On: (25±2)°C |
| Overheating Thermostat | Off: (95±3)°C On: (80±6)°C |
| Range | OII. (3010) C |
| Insulating Resistance | ≥50MΩ |
| Electrical Strength | AC 1.5kV 1min |
| Inlet/Outlet Size | 3/4"(Φ19.5mm) |
| Max. Water Pressure | 0.5MPa |
| Pump Flow Velocity | 40L/min (1.5m of lift) |
| Protection Level | IP44 |
| Vibration Resistance | (5~8)Hz Amplitude±7.5mm Triaxial |
| Vibration Resistance | (8~500)Hz a=2g Triaxial |
| Shock Resistance | Half-sine Wave; a _{peak} = <mark>50g; Triax</mark> ial |
| Working Conditions | -40 °C~+70 °C |
| Storage Conditions | -40 °C~+80 °C |
| Case Dimensions | 504 mm×255 mm×426 mm |
| Weight | 15kg |

4. HEATER INSTALLATION

Please install the heater vertically according to the diagram before use. Pay attention to the direction of heater inlet and outlet, and ensure that the heater position is below the lowest water lever of the engine and that all the air is exhausted out of the heater and it is topped off with coolant.

HWP60A Forced Circulation Heater User Manual

5. OPERATING INSTRUCTIONS

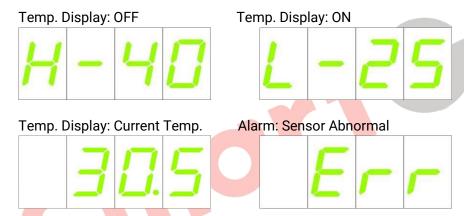

5.1. PANEL AND BUTTON

Table 3 - Panel Display and Buttons

| Button | Definition | Description |
|--------------|------------|--|
| <u>@</u> | Test | Pressing this button to test-run the machine. |
| (<u>;</u>) | Lamp Test | All indicators will be illuminated when the button is pressed. |
| (\$) | Set | Pressing this button to set the temperature value. |
| Δ | Turn Page | Pressing this button to scroll pages of the LED Nixie Tube and adjust the value. |

5.2. DISPLAY DESCRIPTION

The heater is heating on when the "Heating" indicator is illuminated while the Thermostat is open and the heater stops heating when the "Overheat" indicator is flashing.

5.3. PANEL DESCRIPTION

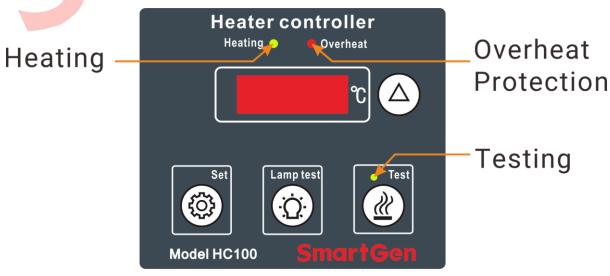

Fig.3 - Operation Panel Drawing

5.4. OPERATION DESCRIPTION

Using this button you can scroll pages of the LED Nixie Tube and adjust the value.

If the water temperature has exceeded the preset "ON" temperature, pressing this button will test-run the heater, after 3s, it turns into Auto mode automatically.

All indicators will be illuminated when the button is pressed.

Pressing this button will enter into setting interface, as shown:

(Letter "H" means that it is the preset "OFF" temperature, here we take 40°C as example), the first digital is flashing and you can adjust it by pressing button. Then press button, the second digital will flash and the adjust way is same as the first digital. Press as example), the first digital is flashing and you can adjust it by pressing button. Then press button, the second digital will flash and the adjusting way is same as the first digital. After doing these, press button, the LED will back the current temperature. All the adjustment should be saved and not lost even when power is off.

6. USE AND MAINTENANCE

6.1. VENT VALVE

Before starting the machine, ensure that all the air is exhausted out of the heater and it is topped off with coolant, and make sure that the pump is full of water by using vent valve.

Fig.4 – Vent Valve Indicating Diagram

6.2. WATER DRAIN VALVE

If water is used, please drain it off when generator is stopped to avoid internal corrosion. Otherwise, the remaining water freezes when temperature is lower than 0°C, which can damage the enclosure.

Corresponding antifreeze is strongly recommended.

Earth line must be soundly connected to earth.

Drain valve: Can be opened or closed using hexagonal tools.

Unit: mm

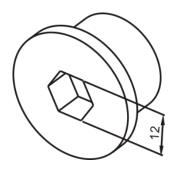

Fig.5 - Water Drain Valve

7. CONNECTIONS

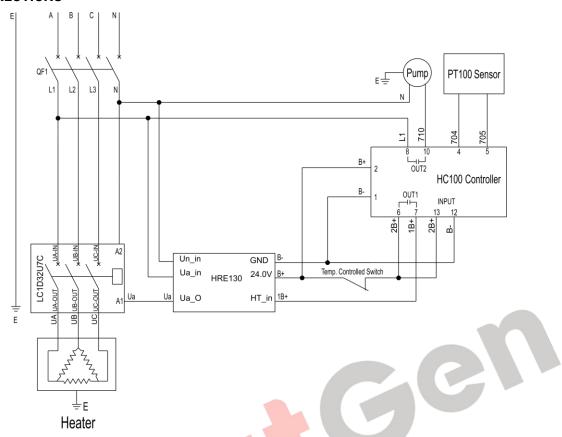

Fig.6 – HWP60A Diagram

Use 4mm² power cable for tie-in. Earth line must be soundly connected to earth.

CASE AND DIMENSIONS

unit: mm

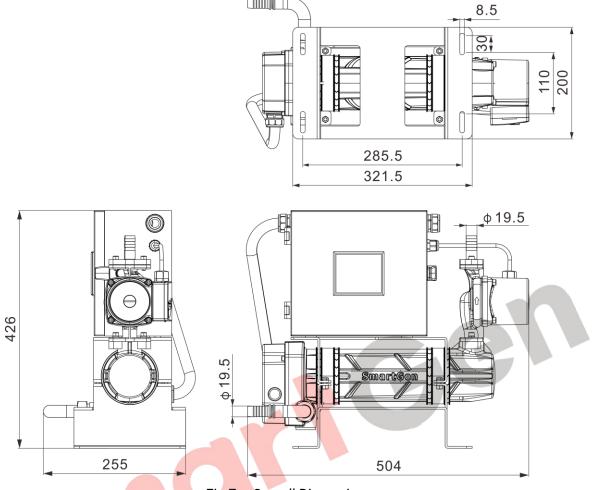

Fig.7 – Overall Dimensions

Note: all the inlets/outlets connectors are Pagoda-shape.
