## 1 OVERVIEW

**HAT821** Dual Power Bus Tie controller is intelligent bus-tie dual-power switchover module with configurable function, automatic measurement, LCD display, and digital communication. It combines digitization, intelligence and networking. Automatic measurement and control can reduce incorrect operation, which is an ideal option for dual-power bus-tie switchover products.

The powerful Microprocessor contained within the unit allows for precision voltage (2-way 3-phase) measuring and make accurate judgment and the corresponding volt free digital output port will active when there is over/under voltage, over/under frequency, loss of phase, phase sequence wrong and other abnormal condition occurs. It has compact structure, advanced circuits, simple wiring and high reliability, and can be widely used in electrical automatic control system of electric power, telecommunications, petroleum, coal, metallurgy, railways, municipal administration, intelligent building, etc.

O

HAT821 Dual Power Bus Tie Controller

# 2 PERFORMANCE AND CHARACTERISTICS

- —4.3 inchs solid color 240x128 LCD display with white backlight, multilingual interface (including English, simplified Chinese or other languages), push-button operation;
- ----Collect and display 2-way 3-phase voltage, frequency and phase;
- ----Display S1/S2 total close times;
- ---Display load 1 and load 2 present continuous power supply time and total power supply time;
- ——Display S1/S2 total power supply time;
- ----Over/under voltage, over/under frequency, loss of phase, phase sequence wrong protection;
- ----Real-time clock (RTC); event log function (event log can record 200 items circularly);
- —Suitable for various AC systems (3- phase 4-wire, 3-phase 3-wire, single-phase 2-wire, and 2-phase 3-wire);
- ——Simultaneously control the closing and opening of the two-way CB switch and the bus-tie CB switch to simplify the control system;
- ---For Stored-Energy type ATS, its close relay will active after the PF Input is active;
- ----Automatic/Manual mode. In manual mode, can force the switch to close or open;
- ——6 buttons on the panel to manually control breaker switch easily;
- ——With breaker re-close function;
- Closing output signal can be set as on intervals or as continuous output, which suitable for CB breaker or CC contactor;
- —All parameters can be set on site. Passwords authentication ensures authorized staff operation only;

Applicable for 2 isolated neutral line;

- -Enabling switch power supply LO/NO output to provide power for switching coil;
- ——Widely DC power supply range allows the controller can bear instantaneous 80V DC input;
- ——Large terminal space allows the controller can bear maximum 625V AC voltage input;
- —With Dual-RS485 isolated communication interface. With "remote controlling, remote measuring, remote communication, remote regulating" function by the ModBus communication protocol. Can remote start/stop the genset and remote control the breaker to close or open;
- ——USB is convenient to debug parameters and upgrade program locally;
- ——Modular design, self extinguishing ABS shell, silicone panel, pluggable terminal, built-in mounting, compact structure with easy installation.

# 3 SPECIFICATION

# Table 2 – Performance Parameters

Items		Contents		
Operating Voltage	<ol> <li>DC8.0V~35.0V, continuous power supply</li> <li>AC(90~305)V power supply A1N1/A2N2</li> </ol>			
Power Consumption	<7W(Standby n	node:≤2W)		
	AC system			
	3P4W (L-L)	(80~530)V		
AC Voltage Input	3P3W (L-L)	(80~625)V DC supply		
	1P2W (L-N)	(50~305)V		
	2P3W (A-B)	(80~530)V		
Rated Frequency	50/60Hz			
Programmble Output 1~6 Relay Capacity	16A AC250V Volts free output			
Programmble Output 7~12 Relay Capacity	8A AC250V Volts free output			
Digital Input	GND (B-) connect is active.			
Communication	<ol> <li>Dual-RS485 isolated interface, MODBUS Protocol</li> <li>D-type USB port</li> </ol>			
Case Dimensions	260mmx180mmx54mm			
Panel Cutout	242mmx161mm			
	Temperature: (-25~+70)°C;			
Working Conditions	Relative Humidity: (20~93)%RH			
Storage Condition	Temperature: (-25~+70)°C			
Protection Level	IP65: when water proof gasket ring inserted between panel and housing.			
Insulation Strength	Apply AC1.5kV voltage between high voltage terminal and low voltage terminal; The leakage current is not more than 3mA within 1min.			
Weight	1.2kg			

# 4 MEASURE AND DISPLAY DATA

No.	Measure & Display Data Items
1	S1/S2 Power Phase Voltage (L1-N,L2-N,L3-N)

# Table 5 – Indicators Description

Indicator Type	Description
	Slow flashing (1time per sec) when warn alarm occurs.
Alarm	Fast flashing (5 times per sec) when fault alarm occurs.
Man	Light on when the module is in Manual mode.
Auto	Light on when the module is in Auto mode.
	Illuminated: QS1 closed, QS2 closed, LOAD1 powered by S1, LOAD2
IOI	powered by S2.
	Flashing: status switching
110	Illuminated: QS1 closed, QTIE closed, LOAD1 and LOAD2 powered by S1.
lio	Flashing: status switching
	Illuminated: QS1 closed, QS2 closed, LOAD1 and LOAD2 powered by S2.
OII	Flashing: status switching
100	Illuminated: QS1 closed, LOAD1 powered by S1, LOAD2 disconnect.
100	Flashing: status switching
001	Illuminated: QS2 closed, LOAD2 powered by S2, LOAD1 disconnect.

Version1.0

Indicator Type	Description
	Flashing: status switching
	Illuminated: QS1, QS2, QTIE are all open, LOAD1 and LOAD2 are
000	disconnect.
	Flashing: status switching

# 5.2 KEY FUNCTION DESCRIPTION

# Table 6 – Buttons Function Description

Icon	Buttons	Function Description
<b>H</b>	IOI	Active in Manual mode. After pressing this key, QS1 will close, QTIE will open and QS2 will close, which means LOAD1 powered by S1 and LOAD2 powered by S2.
ŀ	IIO	Active in Manual mode. After pressing this key, QS1 will close, QTIE will close and QS2 will open, which means LOAD1 and LOAD2 powered by S1.
ĬI	OII	Active in Manual mode. After pressing this key, QS1 will open, QTIE will close and QS2 will close, which means LOAD1 and LOAD2 powered by S2.
ŀ	100	Active in Manual mode. After pressing this key, QS1 will close, QTIE will open and QS2 will open, which means LOAD1 powered by S1 and LOAD2 disconnect.
<u>}-</u> ]	001	Active in Manual mode. After pressing this key, QS1 will open, QTIE will open and QS2 will close, which means LOAD2 powered by S2 and LOAD1 disconnect.
ŀ∕-ſ	000	Active in Manual mode. After pressing this key, QS1 will open, QTIE will open and QS2 will open, which means LOAD1 and LOAD2 disconnect.
e (iz	Man/Auto	Manual mode and Auto mode switching.
5	Alarm Reset	Pressing this key can reset fault alarm.
<b>~/</b>	Return/Homepage	When setting parameters, press the key to return back. In main screen, press the key to return the first screen; in other screen, hold and press the key to return to main screen.
ф/ок	Set/Confirm	In main screen, press the key to enter to menu. In menu screen, press this key can move cursor and confirm setting information.

# 6.2 STATUS DESCRIPTION

# Table 8 – S1 Voltage Status

No.	Item	Description
1	S1 Available	S1 Normal Delay
2	S1 Unavailable	S1 Abnormal Delay
3	S1 Available	Power supply voltage is within the setting range
4	S1 Blackout	Voltage is 0
5	S1 Over Volt	Voltage is higher than the set value
6	S1 Under Volt	Voltage has fallen below the set value
7	S1 Over Freq	Frequency is higher than the set value
8	S1 Under Freq	Frequency has fallen below the set value
9	S1 Loss of Phase	Loss of any phase of A, B and C
10	S1 Phase Seq Wrong	A-B-C phase sequence is wrong

# Table 9 – S2 Voltage Status

No.	Item	Description		
1	S2 Available	S2 Normal Delay		
2	S2 Unavailable	S2 Abnormal Delay		
3	S2 Available	Power supply voltage is within the setting range.		
4	S2 Blackout	Voltage is 0.		
5	S2 Over Volt	Voltage is higher than the set value.		
6	S2 Under Volt	Voltage has fallen below the set value.		
7	S2 Over Freq	Frequency is higher than the set value.		
8	S2 Under Freq	Frequency has fallen below the set value.		
9	S2 Loss of Phase	Loss of any phase of A, B and C.		
10	S2 Phase Seq Wrong	A-B-C phase sequence is wrong.		

#### Table 10 – Switch Status

No.	Item	Description		
1	Ready to Transfer	Switch transfer begins.		
2	QS1 Closing	QS1 closing delay is in progress.		
3	QS1 Opening	QS1 opening delay is in progress.		
4	QS2 Closing	QS2 closing delay is in progress.		
5	QS2 Opening	QS2 opening delay is in progress.		
6	Transfer Rest	Interval time between switch transfer		
7	Waiting QS1 PF	Before QS1 is closed, it's the delay time to confirm "QS1 PF Input" signal is active.		
8	Waiting QS2 PF	Before QS2 is closed, it's the delay time to confirm "QS2 PF Input"		
0		signal is active.		
9	Waiting QTIE PF Before QTIE is closed, it's the delay time to confirm "QTIE PF In signal is active.			
10	Elevator Delay	y Elevator control output before ATS transfer.		
11	S1 On Load         QS1 was already closed and S1 is taking load1.			
12	S2 On Load	QS2 was already closed and S2 is taking load2.		
13	Offload	Switch was already opened and load is disconnected.		
14	QTIE Closing	QTIE closing delay is in progress.		
15	QTIE Opening	QTIE opening delay is in progress.		
16	QS1 & QTIE Closed	QS1 and QTIE were already closed and S1 is taking load1 and load2.		
17	QS2 & QTIE Closed	QS2 and QTIE were already closed and S2 is taking load1 and load2		
18	QS1 & QS2 Closed	QS2 and QTIE were already closed. S1 is taking load1 and S2 is taking load2.		
19	QTIE Closed	QTIE bus-tie switch closed.		

Warning alarms are active when controller detects the alarm signals, and alarm indicator will flash slowly (1time per sec). When alarm is reset, indicator is extinguished, which means warn alarms are not latched.

## Table 11 – Warning Alarms

	No.	Item	Description
1	Forced Open Warn	When the input is active and the action (cut off non-fire supply) select	
		"Warn", it will initiate a warning alarm.	

Fault alarms are active when controller detects the alarm signals. Alarm indicator will flash rapidly (5 times per sec) and the alarm will last until it was removed manually. Fault alarms are latched.

# Table 12 – Fault Aalrms

No.	Item	Description
1	QS1 Failed to Close	QS1 fail to close.
2	QS1 Failed to Open	QS1 fail to open.

RA I	SmartGen ideas for power	HAT821 Dual Power Bus Tie Controller User Manual		
No.	Item	Description		
3	QS2 Failed to Close	QS2 fail to close.		
4	QS2 Failed to Open	QS2 fail to open.		
5	QTIE Failed to Close	QTIE fail to close.		
6	QTIE Failed to Open	QTIE fail to open.		
7	Forced Open Fault	When the input is active and the action (cut off non-fire supply) select "Fault", it will initiate a fault alarm.		
8	Switch Trip Alarm	It will initiate a fault alarm, when the input is active.		
9	QS1 Switch Trip Alarm	It will initiate a fault alarm, when the input is active.		
10	QS2 Switch Trip Alarm	It will initiate a fault alarm, when the input is active.		
11	QS3 Switch Trip Alarm	It will initiate a fault alarm, when the input is active.		

The indication information will continuously display for 2s after it is active.

Table 13 – Indication Information

	Description		
Please Reset The When there is fault alarm	occurs, the indication will be displayed when		
Alarm change the genset mode	change the genset mode to Auto Mode manually.		
2 Panel Locked	The information displays when panel lock is active and keys are pressed (except for UP/Down, Confirm and Return Buttons).		

# Table 14 – Other Status Information

No.	Item	Description		
2	QS1 Close Inhibit	QS1 Load Inhibit input is active.		
3	QS2 Close Inhibit	QS2 Load Inhibit input is active.		
4	QTIE Close Inhibit	QTIE Load Inhibit input is active.		
5	Auto Mode	Current mode is Auto mode.		
6	Manual Mode	Current mode is Manual mode.

#### 6.3 MAIN MENU

In main screen, press 👾 key will enter into the menu interface.					
1.Configuration					
2.Data Calibration					
3. Historical Records	Press Up/Down key to choose parameters (the current line was				
4. Black Box Records	highlighted with black) and then press Confirm key to enter into the				
5. AutoCharge/Recover	corresponding display screen.				
6. Language					
7. About					

**A**NOTE: Default password is 01234, user can change it in case of others change the parameters setting. Please clearly remember the password after changing. If you forget it, please contact SmartGen services.

**A**NOTE: Data Calibration is for factory use only and correct passwords must be input before entered.

O

7 PARAMETERS CONFIGURATION

# 7.1 ILLUSTRATION

In the main interface, press (\*/6) key, choose **Configuration** and press (\*/6) again to enter into password confirmation interface. If password is correct, enter into parameter setting interface, otherwise, exit to main interface directly. Factory default password is **01234**. In parameters configuration interface, pressing (\*/6) key to return the prior menu.

## 7.2 PARAMETERS TABLE

No.	Item	Range	Default	Description
AC	Config			
1	S1 Volt Normal	(0-3600) s	10	The delay from S1 voltage abnormal to normal.
2	S1 Volt Abnormal	(0-3600)s	5	The delay from S1 voltage normal to abnormal.
3	S2 Volt Normal	(0-3600)s	10	The delay from S2 voltage abnormal to normal.
4	S2 Volt Abnormal	(0-3600)s	5	The delay from S2 voltage normal to abnormal.
				0: S1&S2 Master
5	Master Set	(0~2)	0	1: S1 Master
				2: S2 Master
				0: 3 Phase,4 Wire (3P4W)
	AC System	(0~3)	0	1: 3 Phase,3 Wire (3P3W)
6				2: 2 Phase,3 Wire (2P3W)
				3: Single Phase,2 Wire (1P2W)
7	PT Fitted	(0-1)	0	0: Disable ; 1: Enable
8	PT Primary	(30-30000)V	100	Primary voltage of voltage transformer
9	PT Secondary	(30-1000)V	100	Secondary voltage of voltage transformer
10	Rated Voltage	(0-30000)V	220	Rated voltage of AC system
11	Over Volt Warn	(0-1)	1	0: Disable ; 1: Enable
12	Set Value	(0-200)%	120	Upper limit value of voltage; it is abnormal if the value has exceeded the set value.
13	Return	(0-200)%	115	Upper limit return value of voltage; it is normal only when the value has fallen below the set value.
14	Under voltage Warn	(0-1)	1	0: Disable ; 1: Enable
15	Set Value	(0-200)%	80	Lower limit value of voltage; it is abnormal if the value has fallen below the set value.
16	Return Value	(0-200)%	85	Lower limit return value of voltage; it is normal only when the value has exceeded

# Table 15 – Parameter Configuration Form

No.	Item	Range	Default	Description
				the set value.
17	Rated Frequency	(10.0-75.0)Hz	50.0	Rated frequency of AC system
18	Over Frequency Warn	(0-1)	1	0: Disable ; 1: Enable
19	Set Value	(0-200)%	110	Upper limit value of frequency; it is abnormal if the value has exceeded the set value.
20	Return Value	(0- 200)%	104	Upper limit return value of frequency; it is normal only when the value has fallen below the set value.
21	Under Frequency Warn	(0-1)	1	0: Disable ; 1: Enable
22	Set Value	(0- 200)%	90	Lower limit value of frequency; it is abnormal if the value has fallen below the set value.
23	Return Value	(0- 200)%	96	Lower limit return value of frequency; it is normal only when the value has exceeded the set value.
24	Phase Sequence Wrong	(0-1)	1	0: Disable ; 1: Enable
Sw	itch			
1	Switch Power Type	(0~1)	1	0: DC Supply; 1: AC Supply
2	AC Volt Lower Limit	(0~100)%	70	Lower limit voltage of switch power; The switch cannot transfer when the value has fallen below the set value.
3	AC Volt Upper Limit	(0~200)%	200	Upper limit voltage of switch power; The switch cannot transfer when the value has exceeded the set value.
4	Auto Charge/Recover	(0-1)	1	0: Auto Charge Man Rec. 1: Auto Charge/Rec.
5	Fixed Close/Open Time	(0-1)	0	0: Disable ; 1: Enable Disable: The output time was judged depends on the close relay; the longest output time up to the set delay. Enable: The output time last for the preset time.
6	Close Delay	(0.1-20.0)s	5.0	Pulse time of close relay.
7	Open Delay	(0.1-20.0)s	5.0	Pulse time of open relay.
8	Transfer Interval	(0-9999)s	1	Interval time from S1 switch open to S2 switch close; or from S2 switch open to S1 switch close.
9	Forced Open Action	(0-1)	0	0: Warn Alarm 1: Fault Alarm
10	Continually Close	(0-1)	0	0: Disable ; 1: Enable If "Enable" is selected, "Close Time" and "Open Time" are deactivated.

		Denes		Dual Power Bus Tie Controller User Manual
No.	Item	Range	Default	Description
11 12	Elevator Enable Elevator Delay	(0~1) (0~300)s	0 300	0: Disable ; 1: Enable Delay time before load disconnect and switch transfer. It is used for controlling the running elevator to stop at the nearest level until the switch is transferred over.
Digit	Inputs		1

# 7.3 DIGITAL INPUT/OUTPUT FUNCTION DESCRIPTION

#### 7.3.1 INPUT PORTS FUNCTION

Table 18 – In	put Ports Function	Description

No.	Item	Description
0	Not Uesd	Invalid
1	Forced Open	No matter the genset is in manual mode or auto mode, when the input is active, this will force the breaker to transfer the ATS to OFF position. LOAD1 and LOAD2 disconnected.
2	Reserved	
3	Reserved	
4	Lamp Test	When active, all LED lights on the front panel are illuminated and the backlight of the LCD is illuminated while the LCD screen is black in color.
5	Reserved	
6	Reserved	
7	Reserved	
8	Breaker Trip Input	Trip failure input, if input is active, controller will initiate "Breaker Trip Fault" alarm, and forced enter into manual mode at the same time; if input is inactive, alarm can be reset manually.
9	S1 Close Inhibit	In Manual mode, S1 manual close is inhibited; if breaker already closed, users should open it manually. In Auto mode, if breaker already closed, then QS1 disconnect.
10	S2 Close Inhibit	In Manual mode, S2 manual close is inhibited; if breaker already closed, users should open it manually. In Auto mode, if breaker already closed, then QS2 disconnect.
11	QS1 Breaker PF Input	When the S1 PF input is active, S1 close relay will activated.
12	QS2 Breaker PF Input	When the S2 PF input is active, S2 close relay will activated.
13	Reserved	
14	Reserved	
15	Alarm Reset	Reset the current alarm.
16	Alarm Mute	Silence the audible alarm.
17	Reserved	
18	Reserved	
19	S1 Master Input	Set S1 master use compulsively.
20	S2 Master Input	Set S2 master use compulsively.
21	Forced Manual Mode	Set the controller in Manual mode compulsively.

# 7.3.3 CUSTOM COMBINED

Defined combination output is composed by 3 parts, OR condition output SW1, OR condition output SW2, AND condition output SW3.

SW1 or SW2 is TRUE, while SW3 is TRUE, Defined combination output is active;

SW1 and SW2 are **FALSE**, or SW3 is **FALSE**, Defined combination output isdeactivated.

**ANOTE:** SW1, SW2, SW3 can be set as any contents except for "defined combination output" in the output setting.

**ANOTE:** 3 parts of defined combination output (SW1, SW2, SW3) couldn't include or recursively include themselves.

Example,

Contents of OR condition output SW1: output port 1 is active;

Close when OR condition output SW1 is active /inactive: close when active (disconnect when inactive);

Contents of OR condition output SW2, output port 2 is active;

Close when OR condition output SW2 is active /inactive: close when active (disconnect when inactive);

Contents of AND condition output SW3: output port 3 is active;

Close when AND condition output SW3 is active /inactive: close when active (disconnect when inactive);

When input port 1 active or input port 2 active, if input port 3 is active, Defined combination output is outputting; If input port 3 inactive, Defined combination output is not outputting;

When input port 1 inactive and input port 2 inactive, whatever input port 3 is active or not, Defined combination output is not outputting.

#### 8 HISTORICAL RECORDS

On the main screen press  $\frac{\frac{1}{2}}{\sqrt{0\kappa}}$  key and select **Historical Records**, and then press  $\frac{\frac{1}{2}}{\sqrt{0\kappa}}$  key again, the screen will show the historical records interface.

Each record includes:

- Record date and time
- Record type
- Event log
- S1 power supply status
- S2 power supply status
- S1 3-phase voltage
- S2 3-phase voltage
- S1 frequency
- S2 frequency

Maximum pieces of historical record are 200. The first record is latest, and users could check every records by dredge up/down. The latest record will cover the oldest one when records amount exceed 200.

Event log type includes: Action Event, Warn Event and Fault Event. All fault event actions are fault alarm while all warn event actions are warn alarm.

No.	Action Events	Description
1.	Closing QS1	Record when the QS1 close relay activated.
2.	Closing QS2	Record when the QS2 close relay activated.
3.	Opening QS1	Record when the QS1 open relay activated.
4.	Opening QS2	Record when the QS2 open relay activated.
5.	Closing QTIE	Record when the QTIE close output.
6.	Opening QTIE	Record when the QTIE open output.
7.	Auto Mode	Record when the genset mode transferred to Auto Mode.
8.	Manual Mode	Record when the genset mode transferred to Module Mode.

#### Table 18 – Action Events List

#### Table 19 – Operation Events List

No.	Operation Events	Description
1	Manual Key OOO	Press this key to execute OOO action in manual mode.
2	Manual Key OOI	Press this key to execute OOI action in manual mode.
3	Manual Key IOO	Press this key to execute IOO action in manual mode.
4	Manual Key IIO	Press this key to execute IIO action in manual mode.
5	Manual Key Oll	Press this key to execute OII action in manual mode.

	ideas for power	HAT821 Dual Power Bus Tie Controller User Manua				
No.	Operation Events	Description				
6	Manual Key IOI	Press this key to execute IOI action in manual mode.				
7	Remote Key OOO	Using remote communication command to execute OOO action in manual mode.				
8	Remote Key OOI	Using remote communication command to execute OOI action in manual mode.				
9	Remote Key IOO	Using remote communication command to execute IOO action in manual mode.				
10	Remote Key IIO	Using remote communication command to execute IIO action in manual mode.				
11	Remote Key Oll	Using remote communication command to execute OII action in manual mode.				
12	Remote Key IOI	Using remote communication command to execute IOI action in manual mode.				

#### 9 BLACK BOX RECORDS

On the main screen press  $\frac{\text{$$}^{\text{$$}/\text{o}$}}{\text{$$}^{\text{$$}/\text{o}$}}$  key and select **Black Box Records**, and then press  $\frac{\text{$$}^{\text{$$}/\text{o}$}}{\text{$$}^{\text{$$}/\text{o}$}}$  key again, the screen will show the black box records interface.

Maximum pieces of black box record are 5. Every event records total 60s (before 50s and after 10s) data information of this event, and record once per second. There are total 60 groups of data.

Each record includes:

- Record date and time
- Record type

Event log

- S1 power supply status
- S2 power supply status
- S1 3-phase voltage
- S2 3-phase voltage
- S1 frequency
- S2 frequency

Black box is loop record, the latest record will cover the oldest one when records amount exceed

5. The first record is latest. Users could jump to next record by pressing <sup>(a)</sup>/o<sup>(k)</sup>, and check details by pressing up/down button.

Event log type: the action event in auto mode.

# Table 21 – Action Events List

No.	Action Events	Description
1	Auto Action OOO	In auto mode, controller controls breaker transfer to OOO based on the present status and settings.
2	Auto Action OOI	In auto mode, controller controls breaker transfer to OOI based on the present status and settings.
3	Auto Action IOO	In auto mode, controller controls breaker transfer to IOO based on the present status and settings.
4	Auto Action IIO	In auto mode, controller controls breaker transfer to IIO based on the present status and settings.
5	Auto Action OII	In auto mode, controller controls breaker transfer to OII based on the present status and settings.
6	Auto Action IOI	In auto mode, controller controls breaker transfer to IOI based on the present status and settings.
7	Auto Action OIO	In auto mode, controller controls breaker transfer to OIO based on the present status and settings.

10 SWITCH OPERATION

#### 10.1 MANUAL OPERATION

Manual mode is selected by pressing the solution; a LED besides the button will illuminate to confirm the operation.

ATS will shart to switch immediately after pressing "Switch Key". During the switching, corresponding lamps will flash, and then the lamp will be normally illuminated when switch is done. If fail to close or fail to open occurs in the switching process, the controller will alarm (Switch key is still active and the operation can be redone).

Icon	Key Name	Description
	ЮІ	After pressing this key, QS1 will close, QTIE will open, and QS2 will close, which means LOAD1 will be powered by S1 and LOAD2 will be powered by S2.
I	IIO	After pressing this key, QS1 will close, QTIE will close, and QS2 will open, which means LOAD1 and LOAD2 will be powered by S1.
ĬI	OII	After pressing this key, QS1 will open, QTIE will close, and QS2 will close, which means LOAD1 and LOAD2 will be powered by S2.
Ŀł	100	After pressing this key, QS1 will close, QTIE will open, and QS2 will open, which means LOAD1 will be powered by S1 and LOAD2 will be disconnected.
<u>}-</u> ]	001	After pressing this key, QS1 will open, QTIE will open, and QS2 will close, which means LOAD2 will be powered by S2 and LOAD1 will be disconnected.
ŀ∕-ſ	000	After pressing this key, QS1 will open, QTIE will open, and QS2 will open, which means LOAD1 and LOAD2 will be disconnected.

#### Table 21 – Manual Transfer Keys

# 10.2 AUTOMATIC OPERATION

Auto mode is selected by pressing the *button*; a LED besides the button will illuminate to confirm the operation.

Under auto mode, the controller will switch automatically to ensure power supply for LOAD1 and LOAD2 according to S1 S2 status, switch priority and AutoCharge/Recover status.

Power Status	Breaker and	S1&S2 Master	S1 Master	S2 Master		
	Load Status					
S1 Normal	Breaker Status	Status IOI	Status IIO	Status OII		
S2 Normal		QS1 Close	QS1 Close	QS1 Open		
		QTIE Open	QTIE Close	QTIE Close		
		QS2 Close	QS2 Open	QS2 Close		
	Load Status	S1 Supply LOAD1	S1 Supply	S2 Supply		
		S2 Supply LOAD2	LOAD1 and	LOAD1 and		
			LOAD2	LOAD2		
S1 Normal	Breaker Status	Status IIO				
S2 Abnormal		QS1 Close				
		QTIE Close				
		QS2 Open				
	Load Status	S1 Supply LOAD1 and	LOAD2			
S1 Abnormal	Breaker Status	Status Oll				
S2 Normal		QS1 Open				
		QTIE Close				
	~	QS2 Close				
	Load Status	S2 Supply LOAD1 and LOAD2				
S1 Abnormal	Breaker Status	Status OOO				
S2 Abnormal		QS1 Open				
(With under volt trip		QTIE Open				
function)		QS2 Open				
	Load Status	LOAD1 and LOAD2 por	wer off			

#### Table 22 – Auto Breaker Transfer Logic

During the switching process, if fail to close or close inhibit occurs, the corresponding switch will close no more, and other switches that can execute close action will supply power to LOAD1/LOAD2 in prior.

#### 11 ATS POWER SUPPLY

Switch Power Type can be set as DC Power or AC Power. If DC Power is selected, then the switch can be transferred at any time (even when both S1 and S2 are outage). If AC Power is selected, whether the power is normal or not should be judged according to the AN voltage status of S1 and S2 and AC power voltage.

The controller will intelligent control to supply when the power of ATS switch is from S1 and S2. As long as 1 voltage of S1 and S2 is normal, the controller can ensure ATS voltage power normal and can be transferred properly. When ATS voltage power is from LO and NO, it will send close/open signal only if the controller detects voltage power normal.

Fig.2 – Internal Wiring of ATS Power LO-NO Output

0

# 12 COMMUNICATION CONFIGURATION AND CONNECTION

HAT821 ATS controller equips with 2 RS485 serial ports which enable the connection of LAN. It uses MODBUS-RTU protocol via PC or system software, it can also be applicable to dual power switching management to factories, telecom, industrial and civil buildings, which achieves "remote control, remote measuring, remote communication" functions.

More information of Communication Protocol, please refer to "HAT821 Communication Protocol"

# Communication parameters:

Module address	1 (range: 1-254)			
Baud rate	9600 bps (2400/4800/9600/19200bps)			
Data bit	8-bit			
Parity bit	None			
Stop bit	2 bits (1 bit or 2 bits)			

There is a D-type USB port which can be used to connect PC for software upgrading and parameter setting.

# 15 INSTALLATION

Controller is panel built-in design; it is fixed by clips when installed.

16 CLIPS INSTALLATION

Fig.6 – Clips Installation Drawing

Installation Steps:

- 1. Install these 4 clips (put into grooves in front panel) in turn.
- 2. Tighten the screws by using straight screwdriver.
- 3. Tighten the 4 hex nuts by using M4 sleeve.

# 17 TROUBLE SHOOTING

51

Table 25 -	Troubleshooting
	rioubloonlooung

Symptoms	Possible Solutions
Controller no response with power.	Check DC voltage.
	Check DC fuse.
	Check AC Power supply.
RS485 communication is abnormal	Check RS485's connections of A and B is reverse connect or not.
	Check RS485 transfer model whether damage or not.
	Check the module address.
	If above methods can't solve the problem, parallel connection $120\Omega$
	resistor between RS485 A terminal and B terminal is recommended.
Auxiliary Output Error	Check auxiliary output connections, pay attention to normally open
	contact and normally close contact.
	Check the output settings in parameters settings.
Auxiliary Input Abnormal	Ensure that the auxiliary input is soundly connected to GND when it's
	active, while hung up when it is inactive.
	( Note: The input port will be possibly destroyed when connected with
	voltage)
	Check the input settings in parameters settings.
Genset running while ATS not transfer	Check ATS.
	Check the connection wirings between the controller and the ATS.
	Check ATS parameter settings.
